

Pir Mehr Ali Shah
Arid Agriculture University, Rawalpindi

Office of the Controller of Examinations
(TWO LEAVES ANSWER BOOK)

S.No: 058277

No. of Extra Sheets Attached:

Student's Name : Ali Khurshed Regd. No : 20-Ard-748

Name of the Degree/Diploma: Software Engineering (BS) Morning/Evening

Course No: Course Title: Computer Networking

Semester (Fall/Spring/Summer) : Year: 2022 Date of Examination : 18-Dec

Q.No.	1	2	3	4	5	6	7	8	9	10	Marks Obtained /Total Marks	If Applicable Converted Marks/Total Marks
Marks Obtained	1	2	4								7	7/12
Total Marks in Words:	Seven only											
Name of the Teacher												
who taught the course :	Signature of Teacher / Examiner :											

Question NO. 01

(a)

Explanation:

By reference to ~~network~~ layer, it's responsible for receiving the frames from data link & conversion into packets. If address remains unchanged then router opens the header in order to (tr) send the packets to (trans) transport layer for the whole process.

(b)

Find value where $ASCII(A) = 65$:

let's find out the binary conversion of Hexadecimal

The binary conversion of ASCII value
of A = 1000001

The value of A lies between.

2	65
2	32-1
2	16-0
2	8-0
2	4-0
2	2-0
	1-0

Header 0100 1110 1010 0000 0101 0000 0100 1111

Question No. 02.

(b)

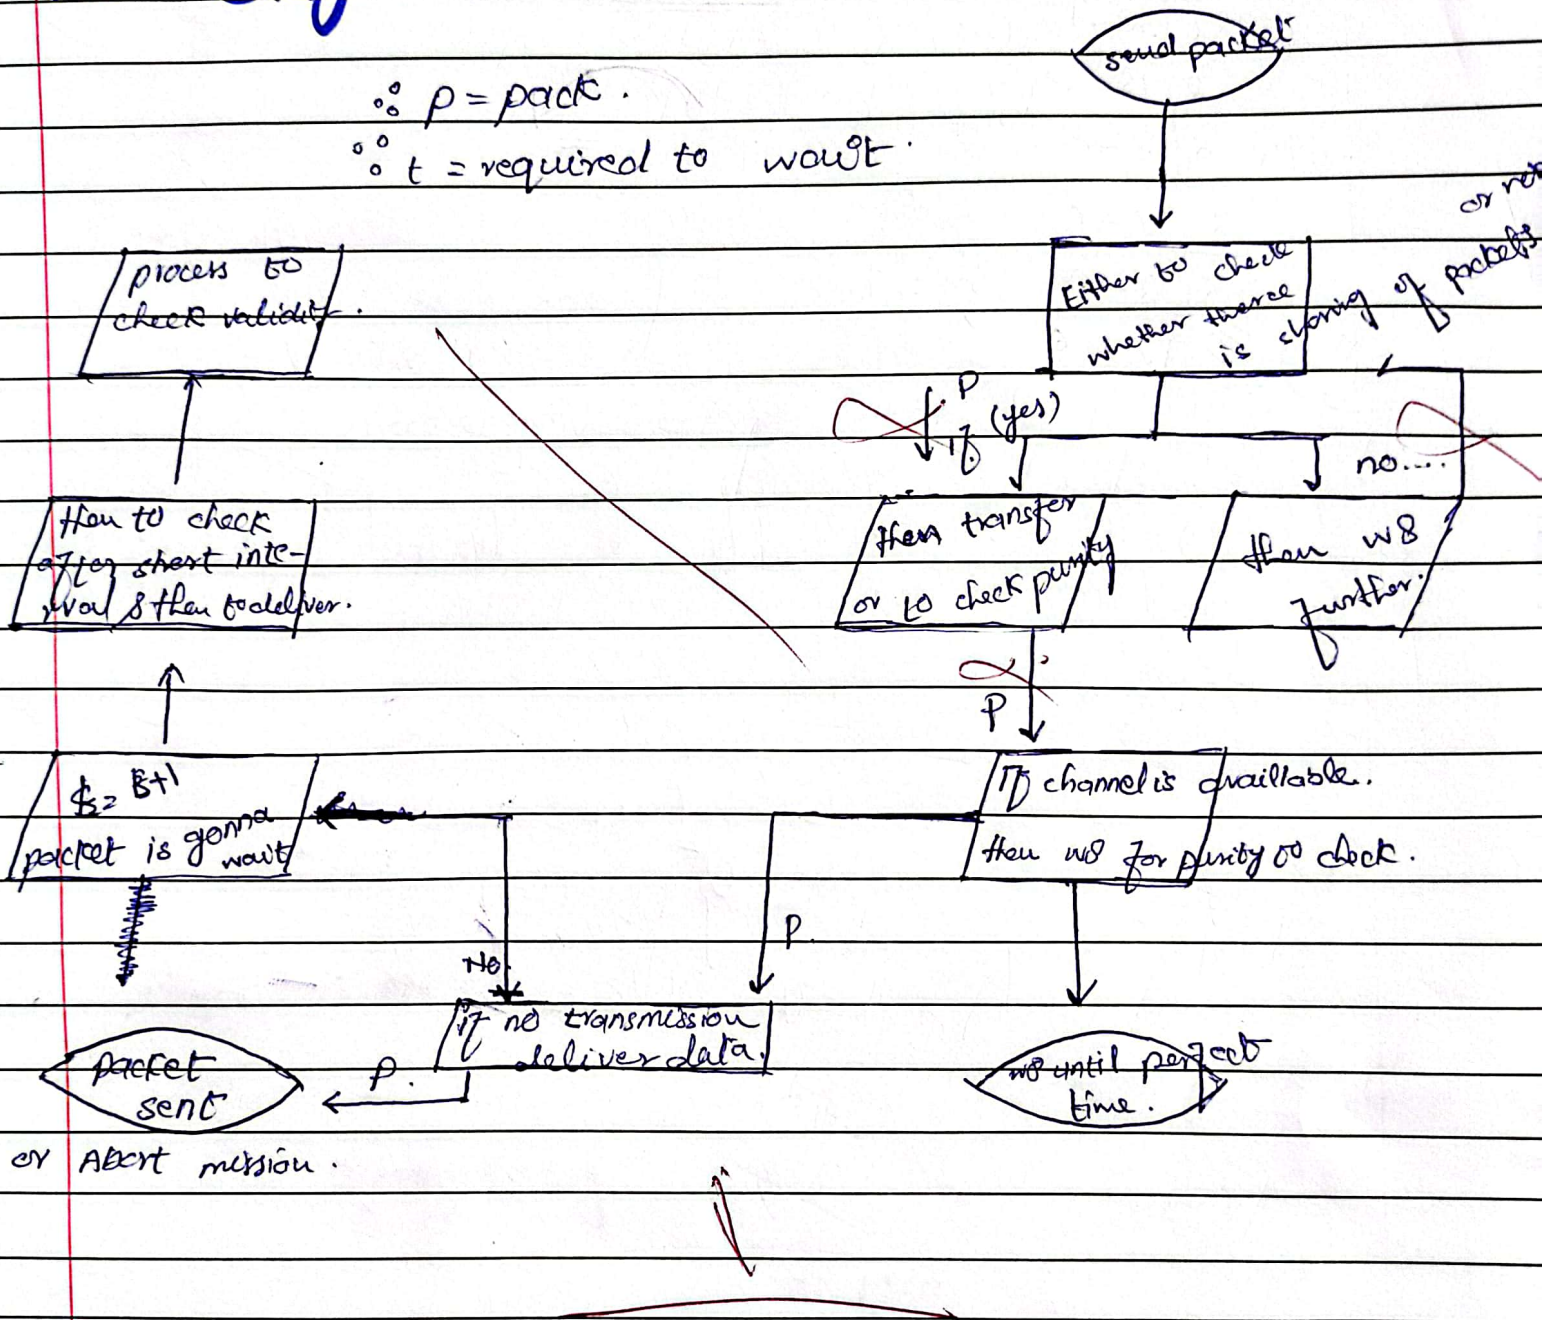

2

Pure Aloha (flow Diagram):

The procedure of pure Aloha or random Access is explained by using flow Diagram.

Flow Diagram:

- °° p = pack.
- °° t = required to wait.

Rough

$$2 \mid 65$$

$$2 \mid 32-1$$

$$2 \mid 16-0$$

$$2 \mid 8-0$$

$$2 \mid 4-0$$

$$2 \mid 2-0$$

$$\underline{\underline{2 \mid 1-0}}$$

Pure Aloha -

Question No. 02.

(a)

Explanation.

In case of CSMA/CD, I mean to explain that there is scenario of Aloha or random Access. In case of Aloha pure or slight, there are too much chances of packet disruption. If packet is disrupted then it'll will send it again & again & at the end of time. The process will be stopped in my point of view. CSMA/CD is not so good idea to use in wireless networks till any technological change in it.

Question No. 03

(a)

Radio frequency:

Frequency = 88 MHz to 108 MHz.

2

(b)

$$\text{starting} = 92.8 \times 10^6 \text{ Hz}$$

$$\text{req} = 300 \times 10^3 \text{ Hz}$$

$$\text{ending} = 103 \times 10^6 \text{ Hz}$$

$$\text{guard band} = 600 \times 10^3 \text{ Hz}$$

$$\therefore 6 \times 10^5$$

\therefore PTA can add round about 6 to 14 guard bands between noise 92 to 103 MHz.

(c)

Answer:-

$$C = 13 \log_2 (1 + \text{SNR}) \quad \text{formula}$$

$$C = 34.8 \text{ MHz}$$

0.6

(d)

$$\text{levels} = 16$$

$$\text{bitrate per level} = 2$$

$$\text{Bitrate} = \frac{16}{2}$$

$$\text{Bitrate} = ?$$

0.5
